

CarbonMetallic®

08 ENDURANCE BRAKE PADS

08 compound

Friction vs temperature

08 compound has gained immediate favour in Endurance Sportscar and GT racing and also in endurance production car racing due to its performance in applications where smooth initial bite is a must. 08 has a slight friction rise with temperature with excellent release and modulation characteristics. Very low abraded disc wear with a fine grey slate like disc finish, similar to 01. Despite its considerable performance, 08 wears the longest of all PFC pads and easily matches wear of the other competitors with much higher bite. Typical applications: Endurance, GT and endurance production car racing, trackday.

Applications: Endurance pad for high temperature applications, GT, Touring car, Driving school, Trackday, Rally Raid.

At Performance Friction® every employee has “passion for the product” ... and it shows ...

PFC Brakes continues to be the market leader wherever drivers demand unrivalled performance and quality – No Compromises™.

Our brake callipers, discs and pads outperform the competition in all markets, from professional racing to commercial fleets.
