

CarbonMetallic®

01 SPRINT / MEDIUM DISTANCE BRAKE PADS

01 compound

Friction vs temperature

01 race compound is one of the most accepted in the PFC's arsenal, and has become the standard by which all brake pads are judged.

01 has good initial bite, with very little torque rise with temperature.

At the end of the stop, 01 compound has less torque scatter than the competition for improved modulation with excellent release.

01 compound has good disc conditioning properties with low wear.

01 compound is one of PFC's most popular race compounds, and wins more World and National Championships annually than any other brake pad on the market.

In many applications if 01 isn't available, 11 will replace it.

Applications: Touring car, TCR, NASCAR, Formula, Rally, Trackday. First choice for a fade-resistant pad.

At Performance Friction® every employee has "passion for the product" ... and it shows ...

PFC Brakes continues to be the market leader wherever drivers demand unrivalled performance and quality – No Compromises™.

Our brake calipers, discs and pads outperform the competition in all markets, from professional racing to commercial fleets.
